4 Usage guide **5**

4.1 Taking the screenshot 5

4.2 Processing an image 7

4.3 Automatic report 8

1 Introduction

This is a document that outlines how the Archero2OCR bot works and what users can do. If you have any questions/requests/bugs that you encounter send me a message on Discord (coomer314 on the Empire server).

2 Goal

The goal for this bot is to remove the responsibility of one or a selection of persons to manually keep track of this data and to automate it. The leader-board will construct itself with individual user screenshots and also remove the pressure off of one person to take the all screenshots before reset and run the bot when reset can be pretty late depending on the timezone.

The damage chart will allow the guilds to see the evolution of the players damage and will allow the leadership to see who is struggling so that they can be helped.

3 Commands

The commands available (so far) there are some you need to register to use.

/help
/ping
/register
/pray
/mi
/user-streak
/streak
/guild-scores today
/guild-scores week
/guild-scores month
/guild-attendance
/guild-damage-report
/manual-report
/user-score today
/user-score week
/user-score month
/guild-status
/set-score
/add-correction

Some of the commands may have additional configuration that appears when typing in the command.

3.1 Basic users

3.1.1 /help

Shows a help message

3.1.2 /ping

Tests if the bot is online, will respond with pong if it is.

3.1.3 /register

Register as a member of a guild. You can only register to one guild.

3.1.4 /pray

Send a prayer to the fortune god

3.2 Registered users

3.2.1 /mi

This is the command that will perform the character recognition on the image. It can be performed by typing /mi and selecting the image when prompted or upload an image/s to the chat. Right click it and choose process MI.

3.2.2 /user-streak

Displays the streak the user has used the bot

3.2.3 /streak

Displays the streak of everyone

3.2.4 /guild-scores today

Displays the guild scores from the current day. Has an additional option.

View
- Scores - Will display in terms of damage
- Percent - Will display in terms of percentage share of damage

3.2.5 /guild-scores week

Displays the scores from the selected week. It has 3 additional options.

day - Day number. Will display the scores of the week containing that day. Defaults to current week.

view
- Scores - Will display in terms of damage.
- Percent - Will display in terms of percentage share of damage.

format
- Message - Will send the data in a message.
- CSV File - Will send the data in a CSV type attachment.

3.2.6 /guild-scores month

Displays the scores of the selected month. It has 3 additional options.

month - Month for which the scores will be displayed. Defaults to current month.

week_day - Damage in that month on that specific day of the week. Ex: damage all Mondays.

format
- Message - Will send the data in a message.
- CSV File - Will send the data in a CSV type attachment.

3.2.7 /guild-attendance

Displays who hasn't attacked on the specified day. It has 2 additional options.

day - Day of the week (numerical)

format
- Message - Will send the data in a message.
- CSV File - Will send the data in a CSV type attachment.
- Heat Chart - Chart that displays who has (green) and hasn't (red) attacked.

3.2.8 /guild-damage-report

Displays the weekly damage of the guild of the selected week. It has 2 additional options.

day - Day of the week (numerical)

format
- Message - Will send the data in a message.
- CSV File - Will send the data in a CSV type attachment.
- Heat Chart - Chart that displays who has (green) and hasn't (red) attacked.

3.2.9 /user-score today

Shows the score the registered user scored today. Has 1 additional option.

view
- Scores - Will display in terms of damage.
- Percent - Will display in terms of percentage share of damage.

3.2.10 /user-score week

Shows the scores the registered user got during the week. Has 3 additional options.

day - Day number. Will display the scores of the week containing that day. Defaults to current day.

view
- Scores - Will display in terms of damage.
- Percent - Will display in terms of percentage share of damage.

format
- Message - Will send the data in a message.
- CSV File - Will send the data in a CSV type attachment.

3.2.11 /user-score month

Shows the scores the registered user got during the month. Has 3 additional options.

week_day - Week day. Will display the scores of that weekday during the selected month. Defaults to current month.

month - Select month.

format
- Message - Will send the data in a message.
- CSV File - Will send the data in a CSV type attachment.

3.3 Guild mods and admins

3.3.1 /guild-status

Shows the configuration of the automatic report. What channel it will be sent to and what person it will @, Also what time it will send the report.

3.3.2 /set-score

Sets the score of a user for an existing entry. It has 3 required parameters.

player_name - Username of the name.

score - Score in the same format as in game ex: 852.36B

day - Day which to replace the score.

3.3.3 /add-correction

Adds adds a correction to a corrections file so if it occurs again the correct name detection will appear. Also retroactively corrects entries with the incorrect name with the corrected name in the database. It has 2 required parameters.

incorrect - Incorrect name the text reader read.

corrected - Correction for the name.

There are individual corrections files for each guild. The program automatically detects what guild to assign the correction from the channel it was sent from.

4 Usage guide

4.1 Taking the screenshot

When taking the in-game screenshot of the leaderboard, if you're outside the top ranking people that appear directly when opening it, please scroll down to where the your entry lies more or less in the middle of the screen. This will allow the bot to fill the entries much faster that just taking the screenshot of the default screen.

IE: if everyone takes a screenshot of the default position and the default shows the top 10, the first screenshot will update with 10-11 entries depending if you're in or not the top 10, but the next person will only update 0-1 entries. Meaning it would take 30-40 images to fill out the leaderboard. However in the first case it could take to as little as 6-7 images to fill out the leaderboard. Example of a "*correct*" and "*incorrect*" screenshots.

Incorrect

Correct

Additionally, please try to make sure peoples scores and names don't get cropped in the leaderboard. In this case both above images all have complete entries which will help the reader. Try and avoid the following:

Avoid

If this screenshot was processed by the bot it could lead to issues with Maxsanity's and Carlo's scores. The bot has some filters to filter out incomplete scores but it doesn't hurt to help it avoid such problems.

4.2 Processing an image

The first thing to do is register to the bot with the **/register** command. I'd appreciate you enter your name with just letters in whatever alphabet you used. But special decorative characters leave out.

The bot takes screenshots as an input and processes everyone in the image. This allows for processing the minimum amount of image possible (theoretically). For the screenshot I'd appreciate if you scroll down in the leaderboard until your entry is in the center (for those under the topX that appear by default when entering the ranking). Go to discord and in the *BOT-TESTING* chat you can either write **/mi** and select your image or upload the image to the chat then either right-click (computer) or press and hold (phone) -> apps -> process MI and it will process the image.

In the beginning I'd appreciate you do it in the second manner as I will be able to see where the character identification fails and what is making it fail.

If your score has already been recorded by someone else's screenshot, you will be prompted with the recorded score in the database. If it coincides keep the existing score, if it doesn't press the update button to update your score with the new readings.

If you see that an incorrect name reading was recorded you can correct it with the command **/add-correction**, The program will make mistakes, however I have a corrections file that will correct incorrect detections if they exist in the file. The more the program is used and corrections are made the more robust it will become. Please even if your name isn't the one detected incorrectly add entries to the file. If the name has special characters and you can't copy them let me know so I can add the entry manually.

4.3 Automatic report

An automatic heatmap report of the weekly damage will be sent to the guilds a couple hours after reset.
